Original Instructions
Keep These Instructions for Future Reference.
CAUTION: Read the instructions before using the machine.
(If this machine changes ownership, this manual must accompany machine.)
WARNING

Failure to install, maintain, and/or operate this machine according to the manufacturer's instructions may result in conditions which can produce bodily injury and/or property damage.

W030

WARNING

For your safety and to reduce the risk of fire or an explosion, do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

W022

NOTE: The WARNING and IMPORTANT instructions appearing in this manual are not meant to cover all possible conditions and situations that may occur. It must be understood that common sense, caution, and care- fulness are factors which cannot be built into these washers. These factors MUST BE supplied by the person(s) installing, maintaining, or operating the unit.

Always contact the distributor, service agent, or the manufac- turer about any problems or conditions you do not understand.

Read all instructions before using unit.

This product uses FreeRTOS V7.2.0 (www.freertos.org).
Product Registration

New owners of Alliance Laundry Systems equipment are encouraged to register their appliance to insure proper limited warranty coverage. Register online at http://www.speedqueen.com/home/en-us/support/product-registration.aspx or contact your dealer to register your appliance. All information will be kept confidential and will not be distributed to other parties.

Safety Information

Explanation of Safety Messages

Precautionary statements ("DANGER," "WARNING," and "CAUTION"), followed by specific instructions, are found in this manual and on machine decals. These precautions are intended for the personal safety of the operator, user, servicer, and those maintaining the machine.

<table>
<thead>
<tr>
<th>DANGER</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicates an imminently hazardous situation that, if not avoided, will cause severe personal injury or death.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicates a hazardous situation that, if not avoided, could cause severe personal injury or death.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicates a hazardous situation that, if not avoided, may cause minor or moderate personal injury or property damage.</td>
</tr>
</tbody>
</table>

Additional precautionary statements ("IMPORTANT" and "NOTE") are followed by specific instructions.

IMPORTANT: The word “IMPORTANT” is used to inform the reader of specific procedures where minor machine damage will occur if the procedure is not followed.

NOTE: The word “NOTE” is used to communicate installation, operation, maintenance or servicing information that is important but not hazard related.

Important Safety Instructions

Save These Instructions

![WARNING]

To reduce the risk of fire, electric shock, serious injury or death to persons when using your washer, follow these basic precautions:

- Read all instructions before using the washer.
- Install the washer according to the INSTALLATION INSTRUCTIONS. Refer to the EARTH/GROUND INSTRUCTIONS in the INSTALLATION manual for the proper earth/ground connection of the washer. All connections for water, drain, electrical power and earth/ground must comply with local codes and be made by licensed personnel when required. Do not do it yourself.
- Do not install or store the washer where it will be exposed to water and/or weather.
- Do not add the following substances or textiles containing traces of the following substances to the wash water: gasoline, kerosene, waxes, cooking oils, vegetable oils, machine oils, dry-cleaning solvents, flammable chemicals, thinners or other flammable or explosive substances. These substances give off vapors that could ignite, explode or cause the fabric to catch on fire by itself.
- Under certain conditions, hydrogen gas may be produced in a hot water system that has not been used for two weeks or more. HYDROGEN GAS IS EXPLOSIVE. If the hot water system has not been used for such a period, before using a washing machine or combination washer-dryer, turn on all hot water faucets and let the water flow from each for several minutes. This will release any accumulated hydrogen gas. THE GAS IS FLAMMABLE, DO NOT SMOKE OR USE AN OPEN FLAME DURING THIS TIME.
- To reduce the risk of an electric shock or fire, DO NOT use an extension cord or an adapter to connect the washer to the electrical power source.
- Do not allow children to play on or in the washer. Close supervision of children is necessary when the washer is used near children. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning the use of the appliance by a person responsible for their safety. This is a safety rule for all appliances.
- Cleaning and user maintenance shall not be made by children without supervision.
• Children less than three years should be kept away unless continuously supervised.
• Do not reach into the washer if the washtub or agitator, if applicable, is moving.
• Never operate the washer with any guards, panels and/or parts removed or broken. DO NOT tamper with the controls or bypass any safety devices.
• Use your washer only for its intended purpose, washing clothes. Always follow the fabric care instructions supplied by the garment manufacturer.
• Always read and follow manufacturer’s instructions on packages of laundry and cleaning aids. To reduce the risk of poisoning or chemical burns, keep them out of the reach of children at all times (preferably in a locked cabinet). Heed all warnings or precautions.
• Do not use fabric softeners or products to eliminate static unless recommended by the manufacturer of the fabric softener or product.
• Lid MUST BE CLOSED any time the washer is in operation. DO NOT bypass the lid switch or lid lock to permit the washer to operate with the lid open.
• Be sure water connections have a shut-off valve and that fill hose connections are tight. CLOSE the shut-off valves at the end of each wash day.
• Keep your washer in good condition. Bumping or dropping the washer can damage safety features. If this occurs, have your washer checked by a qualified service person.
• Do not repair or replace any part of the washer, or attempt any servicing unless specifically recommended in the user-maintenance instructions or in published user-repair instructions that you understand and have the skills to carry out. ALWAYS disconnect the washer from electrical supply before attempting any service.
• Disconnect the power cord by grasping the plug, not the cord. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
• Before the washer is removed from service or discarded, remove the lid or door to the washing compartment.
• Failure to install, maintain, and/or operate this washer according to the manufacturer’s instructions may result in conditions which can produce bodily injury and/or property damage.

NOTE: The WARNING and IMPORTANT SAFETY INSTRUCTIONS appearing in this manual are not meant to cover all possible conditions and situations that may occur. Observe and be aware of other labels and precautions that are located on the machine. They are intended to provide instruction for safe use of the machine. Common sense, caution and care must be exercised when installing, maintaining, or operating the washer.
Before Washing

Prepare Wash Load

Empty Pockets and Cuffs
Make sure all pockets are empty and turn them inside out. One bobby pin, metal or plastic toy, nail or sharp object in a load can catch laundry, cause tears and plug the pump. Facial tissue left in a pocket will produce extreme "lint". A crayon or lipstick in a wash load may cause stains that cannot be removed. Roll down cuffs and shake out grass, sand and gravel.

Strings on clothing such as hooded sweatshirts may get caught in or around the agitator. Remove the strings if possible or tie them together.

Mend Rips and Tears
Little holes can become bigger in the washer. Mend holes and tears before placing garments in the washer.

Close Zipper and Fasten Hooks
These can catch on garments in a wash load and tear them. Tie belts and sashes so they won’t wind around clothes.

Check For Colorfastness
Squeeze a portion of garment in warm or hot sudsy water. If the color bleeds or runs, wash the item separately in cold water.

Sort Items
Different items use different wash cycles and temperatures. Always follow the manufacturer’s care label. Proper sorting is easy if you follow a few guidelines:
1. Sort by Color: Separate items into loads of whites, darks, lights and non-colorfast.
3. Sort by Temperature: Separate items into loads that can be washed in cold, warm or hot water.
4. Sort by Type and Amount of Soil: Heavily soiled clothes will need extra treatment. Lightly soiled clothes can become dingy if washed with heavily soiled items.
5. Sort Lint “Shedders” From Lint “Receivers”: Some fabrics attract lint and should not be washed with lint-shedding loads. Lint shedders are cottons, terry towels, chenille bedspreads, rugs and clothes that have been heavily bleached. Lint receivers are synthetics, permanent or durable press, knits (including socks), corduroy, and other smooth fabrics.

Pretreat
Pretreat shirt collars and cuffs with a pretreat product or liquid detergent when placing them in the washer. Before washing, treat special stains individually.

WARNING
Do not wash or dry items soiled with vegetable or cooking oils. Some oils may remain after washing and may cause the fabric to catch on fire by itself.

Loading the Washer

Load Articles

NOTE: Always add detergent first.
- Load larger and heavier items first so they are at the bottom of the washtub.
- Load items by the amount of space they take up, not by their weight.
- Mix large and small items in a load to get the best washing results. For example, don’t wash a single large item such as a throw rug. Add several smaller items to avoid an out-of-balance condition.
- An out-of-balance load may limit spin speeds.
- The WASH and SPIN STATUS lights will flash twice at the end of a cycle if there was an unbalanced load.
- Drop items loosely into the washtub. The bulk of the clothes rather than the weight will determine load size. Do not pack items in or wrap them around the agitator. Overloading can cause poor cleaning, excessive wrinkling and tears.
• Items should move freely through the wash water for best cleaning results.
• When washing very large items, do not fill washtub as full as with other loads.

**Load Size - Auto Fill Water Levels**

• This washer has an Auto Fill feature. It will automatically select the proper water level for the load size and type of fabric that is being washed. Auto Fill is recommended for the best wash performance in all cycles.
• Auto Fill works in multiple stages. During the first fill step of the cycle, water will fill to the minimum level programmed for the specific cycle selected. Once the wash step begins, the control starts sensing the load. Once sensing is complete more water may be added to optimize wash results.
• If you pause the cycle after it started, the Auto Fill sensing stage will begin again once the cycle is resumed. It will determine if any items have been added and if more water is needed.
• Overloading the washtub can result in poor washing and rinsing.

**Load Size - Manual Water Levels**

• Although the Auto Fill selection is recommended for the best wash performance in all cycles, there are three manual load size selections as well.
• The water level in your washer should fit the size of your wash load. Small loads will use lower water levels. There must be enough water in the washtub to allow items to move and turn over freely.

**WRONG Water Level for Size of Load**

**CORRECT Water Level for Size of Load**

• Overloading the washtub can result in poor washing and rinsing.

**IMPORTANT:** If in doubt when using a manual selection, always use a larger load size. Most average loads will require the Large Load Size setting. Failure to have the correct volume of water relative to the load may decrease washer performance.

**Manual Load Sizes**

<table>
<thead>
<tr>
<th>Manual Load Sizes</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Small</td>
<td>1-2 permanent press dress shirts or 2 pillow cases or 1 lightweight dress or similar size load</td>
</tr>
<tr>
<td>Medium</td>
<td>6-7 permanent press shirts or 2 twin sheets, 2 pillow cases or 8 standard bath towels, 6 wash cloths</td>
</tr>
<tr>
<td>Large</td>
<td>8-9 shirts, 5 pair polyester pants or 2 queen size sheets, 4 pillow cases, 2 nightgowns, 1 pair men’s pajamas or 1 queen size bedspread</td>
</tr>
</tbody>
</table>

The manual load size water levels will vary depending on the wash cycle selected. If the wrong load size is selected, the machine may add more water.

**Wash Temperature**

**Hot**

Hot water is the most effective for cleaning, but it is not recommended for all fabric types (read labels).

**Warm**

The Warm Wash is useful for providing a thorough cleaning on light and moderately soiled clothing without damaging fabric or adding to color fading. Warm water also reduces wrinkling.
Use with non-colorfast or dark colors, permanent press, silks, woolens, nylon, and acrylic.

Cold

The Cold Wash is ideal for delicate items. Although its cleaning abilities are not as great as with hot or warm water, it is useful for colors that bleed easily and for sensitive fabrics.

All rinses use cold water. It is the most beneficial for fabrics. Cold rinses reduce wrinkling and color fading. In addition, cold rinses will save money and energy.

NOTE: In wash temperatures colder than 60°F [16°C], detergents do not dissolve well. This may cause ineffective cleaning, or lint and residue to form.

NOTE: Always follow manufacturer’s care labels.

Water Supply Temperature

Water temperature is determined by the temperature of the incoming water supply. The washer does not heat or cool the water.

For example, northern climates will have much colder incoming water during the winter months. Southern climates will have much warmer cold water during the summer months.

Wash Temperature Guide

<table>
<thead>
<tr>
<th>Water Temperature</th>
<th>Use</th>
<th>Comments</th>

</tr>
</tbody>
</table>

Table 1 continues...

Energy

You can save energy when washing by following these guidelines:

1. Heating water accounts for the greatest energy expense when washing. Save on heating water by using Warm or Cold washes.
2. Wash full loads, but do not overload.
Operating Your Washer

Determine Proper Cycle

The following cycle descriptions will help determine which cycle to choose depending on the type of laundry being washed.

Heavy Duty

Use for sturdy items, like play or work clothes, heavily soiled jeans, T-shirts, etc. There is a longer wash time for the best results when cleaning heavily soiled items.

Normal Eco

This cycle uses a spray rinse to reduce water consumption. It also uses less hot water. This cycle is recommended for washing everyday cottons and linens. If using fabric softener in this cycle, select the Extra Rinse option.

Perm Press

Use for permanent press items and synthetics. The final spin is a medium spin speed.

Delicate

Wash items with delicate and/or gentle on the garment tag in this cycle. Due to this cycle’s uniquely designed motion, stiff jeans and throw rugs also wash well in this cycle.

This cycle is designed to gently move items through the water so it fills to a higher water level. It also has a low speed final spin.

Waterproof Items

If waterproof or water-resistant items need to be washed, use only the Delicate Cycle.

Examples of waterproof items include rain coats and bed linens. Load the items evenly and load washtub no more than 1/2 full. For best washing results, add another item such as a cotton sheet on top of the waterproof items to make sure they get fully submersed in the water and that no air is trapped under the waterproof items.

Load Size

The Load Size Selection determines the amount of water used in the cycle.

Choose Small, Large or Auto Fill according to the amount of laundry being washed.

Auto Fill will provide the most efficient use of water and also enhance wash performance by optimizing the water level for each particular load size and type.

NOTE: Auto Fill works in multiple stages. During the first fill step of the cycle, water will fill to the minimum level programmed for the specific cycle selected. Once the wash step begins, the control starts sensing the load. Once sensing is complete more water may be added to optimize wash results. This process may take several fills to optimize the water level. It is part of the machine’s normal operation.

Extra Rinse

This optional setting is useful for detergent sensitive skin. By pressing the EXTRA RINSE button to ON, the cycle will provide an additional rinse.

Status

The active Status light will flash at the beginning of the cycle. The Status lights are lit throughout the cycle to show what part of the cycle is running.
### Light Description

<table>
<thead>
<tr>
<th>Light</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wash</td>
<td>The Wash status light is lit during the first fill step and the wash step of the cycle.</td>
</tr>
<tr>
<td>Rinse</td>
<td>The Rinse status light is lit during the rinse portions of the cycle including Extra Rinse, if selected.</td>
</tr>
<tr>
<td>Spin</td>
<td>The Spin status light is lit during the final spin portion of the cycle.</td>
</tr>
<tr>
<td>Lid Lock</td>
<td>The Lid Lock status light will flash when trying to lock. It is lit any time the lid is locked.</td>
</tr>
</tbody>
</table>

### To Wash Clothes

**IMPORTANT:** Before using your new washer, make sure the washer cord is connected to an appropriate electrical outlet that is properly installed and connected to a protective earth/ground. Make sure the washer hoses are connected to the hot and cold water faucets, and that the faucets are turned on. Be sure the drain hose is not kinked and is inserted into a drain. Refer to the INSTALLATION INSTRUCTIONS for details of proper washer installation.

**IMPORTANT:** Prior to first wash, use an all purpose cleaner, or a detergent and water solution, and a damp cloth to remove shipping dust from inside of wash drum.

1. Get the clothes ready for washing. Empty pockets and cuffs. Sort items into separate loads. Pretreat stains and heavily soiled areas.

   **IMPORTANT:** Remove all sharp objects from laundry to avoid tears and rips to items during normal machine operation.

2. Measure and add low sudsing, High Efficiency (HE) detergent to the washtub. Follow instructions on detergent package for amount to use.

3. Add clothes loosely into the washtub (16 lbs. [7.2 kg] maximum dry clothes load).

4. Close the lid. The washer will not fill, agitate or spin with the lid open.

5. Set the WASH TEMPERATURE control. (All rinses are cold.)
6. Set the LOAD SIZE (water level) control.
7. Select EXTRA RINSE if desired.
8. Select the cycle according to the type of fabric being washed. Refer to Determine Proper Cycle. If the selected cycle is not the correct cycle for the fabric being washed, you may change the cycle selection at any time until the first wash fill is complete.

   **IMPORTANT:** Once the first wash fill is complete, changing the Cycle Selection knob will have no effect.

   **NOTE:** The Normal Eco cycle is recommended for everyday cottons and linens.

9. Press the START/PAUSE button to begin the cycle. The lid will stay unlocked during the first fill so you can easily add
items. The lid will lock automatically after the initial wet-down fill and before agitation begins.

**NOTE:** Lid must be closed for fill, agitation and spin to start.

During the first fill when the Auto Fill Load Size is selected, water fills to the minimum level programmed for the specific cycle selected. Once the wash step begins, the control starts sensing the load. Once sensing is complete more water may be added to optimize wash results.

The washer will stop (pause) shortly before the wash and rinse spins. This is a normal part of the cycle.

The lid will automatically unlock at the end of the cycle after a short pause to ensure there is no washtub movement.

**Pausing the Cycle**

The lid will stay unlocked during the first wash fill so you can add items. Lifting the lid during this time will pause the cycle. You must press the Start/Pause button once the lid is closed to resume the cycle.

You can also pause the cycle after the first fill to unlock the lid. However the cycle selection can't be changed at this time.

**NOTE:** You can't pause a cycle right after starting it.

**There is a short delay while the machine is energizing.**

1. To pause a running cycle, press the Start/Pause button once. The current Status light will go out.
2. The lid will unlock after about 10 seconds if the cycle is in agitate or up to 60 seconds if the cycle is in spin.
3. The LID LOCK Status light will flash to indicate the cycle is paused.
4. Press the Start/Pause button again to resume the cycle. It will start from the place it was in the cycle when paused. You can't change the cycle selection while it is paused.

The Auto Fill sensing stage will begin again after the cycle has been restarted. If you pause the cycle to add an item, once the cycle resumes it will sense if more water needs to be added or not.

**Canceling the Cycle**

You can change the cycle during the first wash fill. If you need to change the cycle after that you must cancel it first.

1. To cancel a cycle, hold the Start/Pause button for three seconds.
2. The lid will unlock after about 10 seconds if the cycle is in agitate or up to 60 seconds if the cycle is in spin.
3. The LID LOCK Status light will go out.
4. You can now change the cycle type, if desired. For example, you may want to change it from HEAVY DUTY to DELICATE depending on the type of clothes being washed.
5. Press the Start/Pause button to start the new cycle.

**NOTE:** If you change the cycle and press Start/Pause before the lid unlocks, the new cycle will begin after the motor has stopped.
The cycles of your washer include several different stages. Refer to the tables below for what can be expected during the cycles that you select.

The times listed are the default times. They are approximate and will vary depending on the cycle and options chosen.

The Extra Rinse option must be selected to be included in the cycle.

**NOTE:** The rinse water temperature will be cold, including when optional rinses are selected.

<td>Lid lock clicking at end of cycle or while pausing</td>
<td>The lid lock needs to make two clicks before fully releasing. Wait to hear both before opening the lid.</td>
</tr>
</tbody>
</table>

Table 3

**Optional Features**

**Bleach Dispenser**

The bleach dispenser is located in the left front corner, under the lid.

Use liquid bleach in the dispenser. Powdered bleach must not be used in the dispenser. Add powdered bleach to the wash water.

Use no more than one cup chlorine bleach for large loads, three-quarters cup for medium and one-half cup for small loads.

Carefully pour recommended amount of bleach into the dispenser before the start of the wash cycle.

Be careful not to spill undiluted bleach. It is a strong chemical and can damage some fabrics if it is not properly diluted.

Bleach is very corrosive and overfilling the dispenser can cause chemical damage to the washer components. Components damaged by bleach are not covered under the product warranty.

**Fabric Softener Dispenser**

Fabric softener should not be used with the Normal Eco or Spin Only cycles unless the Extra Rinse option is also selected.

**To Use Dispenser**

After the clothes are loaded into the washtub and before the start of the WASH cycle, pour the proper amount of liquid fabric softener into the bottle measuring cap (refer to bottle directions). Pour into dispenser.

The large fabric softener dispenser allows for the fabric softener to be diluted with water. We recommend adding water up to the fill level. Do not exceed tip of arrow which indicates correct fill level. Over-filling can allow fabric softener to spill onto the clothes, causing stains on clothes if the softener comes into contact with detergent suds.

Setting the water level to medium or higher will result in better performance from the fabric softener.

The fabric softener will remain in the dispenser during the wash fill, agitation and spin. At the end of the wash spin, the liquid fabric softener will be dispensed into the washtub through the slots in the agitator and will be mixed with the incoming rinse water.

**To Clean the Dispenser**

1. Grasp the entire fabric softener assembly firmly with both hands and place your thumbs inside the hole at the top.
2. Pull quickly up and towards you. The assembly will come off the agitator.
3. Lay down a cloth on a hard, flat surface.
4. Lay the assembly on the cloth on its side so the vertical lines are facing up.
5. Place your palms on the ridge at the base of the dispenser housing and press down firmly. The assembly will split apart for easy cleaning.
6. Soak housing, cup and funnel in hot soapy water. Use a small brush to scrub if needed.
7. Rinse housing, cup and funnel clean.
8. The inside of the agitator can also be cleaned.
9. After cleaning, install dispenser funnel, cup and housing until they click into place.
10. Push assembly directly downward onto top of agitator until firmly snapped in place.

**IMPORTANT:** When adding detergent to the wash load, DO NOT allow any detergent to enter the softener dispenser cup. If this happens, refer to the cleaning instructions.

1. Dispenser Housing
2. Dispenser Cup
3. Dispenser Funnel
4. Agitator

**Use Tips**

- Fabric softener spilled onto garments may cause staining. To remove, dampen stain and rub with bar soap. Wash as usual.
- Liquid fabric softeners will be dispensed during the first rinse and should not be combined with bleach, bluing, starch, detergents, soaps or packaged water conditioners.
- When adding detergent to wash water, do not allow any to enter into softener dispenser cup, as softener will become gummy.

To prevent softener buildup, the dispenser can be filled with clean water for automatic cleaning. This can be done in washing cycles other than when softener is used.
To keep clothes looking white or bright, use good washing practices at all times to prevent a gradual build-up of soil or water hardness minerals on them. If you notice that your clothes are not as bright as they should be, take corrective measures immediately.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gray or Dingy Clothes</td>

</tbody>
</table>
Cold Weather Care

If the unit is delivered on a cold day (below freezing), or is stored in an unheated room or area during the cold months, do not attempt to operate the washer until it has had a chance to warm up. Water from the previous cycle may remain.

Winterizing the Washer

Follow these steps to prevent damage from freezing water.
1. Unplug washer.
2. Remove two screws from bottom of front panel.
3. Remove hose from drain pump.
4. Let water drain out and reconnect hose.
5. Turn off water supply.
6. Remove fill hoses and allow them to drain.
7. Use compressed air to blow water out of water valve:
   a. Plug washer into electrical power.
   b. Select a Warm wash temperature.
   c. Start a cycle. This will open both sides of water valve.
   d. Use compressed air to blow out any residual water.

Care of Your Washer

Use only a damp or sudsy cloth for cleaning the control panel. Some cleaning products may harm the finish on the control panel or damage the interior. DO NOT use products that contain alcohol on the control panel. Wipe the panel dry after cleaning.

Wipe the washer cabinet as needed. If detergent, bleach or other washing products are spilled on the cabinet, wipe immediately. Some products will cause permanent damage if spilled on the cabinet.

Do not use scouring pads or abrasive cleansers on control panel or cabinet.

The washtub will need no particular care though it may need rinsing or wiping after some unusual loads have been washed. This also may be necessary if too little detergent has been used.

Leave the lid open to allow the inside of the washer to dry out after use. This helps prevent musty odors from developing.

The agitator should not be removed except for service. The washtub is designed to be self cleaning.

Replacing Hoses

Hoses and other rubber parts deteriorate after extended use. Hoses may develop cracks, blisters or material wear from the temperature and constant high pressure they are subjected to.

Filter Screens

Check the filter screens in the fill hoses for debris or damage every six months. Clean or replace them if necessary.

If the washer is filling with water slower than normal, check the filter screens. Clean or replace them if necessary.

Order filter screen Part No. 803615 from the nearest authorized parts distributor.

Vacations and Extended Non-Use

IMPORTANT: To avoid possible property damage due to flooding, turn off the water supply to the washer whenever there will be an extended period of non-use.
Preventative Maintenance

Follow these guidelines to ensure the washer operates properly. Call for service if you observe any of the following: water of any amount on the floor, an increase in operating noise or water remaining in the wash basket after a cycle.

<table>
<thead>
<tr>
<th>Frequency</th>
<th>Maintenance Procedure</th>
</tr>
</thead>
</table>
| Monthly          | 1. Check all hoses and the drain for leaks.  
                    2. Check the lid switch for proper operation.  
                    3. Check to make sure the washer is level.  
                    4. Clean upper 2-3 inches of wash tub. Fill washer with warm water at highest setting. Use an all-purpose cleaner or a steel wool soap pad.         |
| Every six months | 1. Clean the filter screens in the fill hoses.                                         |
| Every five years | 1. Have a qualified service technician conduct general preventative maintenance on the washer to ensure it operates properly.  
                    2. Replace the fill hoses.                                                          |

Table 4

Reinstallation of Shipping Materials

You must install the shipping brace and shipping plug any time the washer is moved.

Shipping Brace

The shipping brace in the lid opening should be saved and reinstalled whenever the washer is moved. To reinstall the brace, open the washer lid and place the brace over the washer agitator, placing the back of the brace into the lid opening first.

Shipping Plug

The plastic shipping plug should be saved and reinstalled any time the washer is moved. The plug fits into two openings: The base opening and the shipping plug opening on the bottom of the movable pivot dome. The plug MUST be inserted into both openings to prevent damage to the washer. In order to accomplish this, the shipping plug opening must be directly lined up with the base opening.
## Troubleshooting

Try these troubleshooting tips before making a service call. They may save you time and money.

<table>
<thead>
<tr>
<th>Washer Symptom</th>
<th>Possible Cause/Solution</th>
</tr>
</thead>
</table>
| Won't Spin                   | • Make sure lid is closed.  
• Press Start/Pause button to start washer.  
• Make sure power cord is plugged all the way into the electrical outlet.  
• Check the laundry room fuse or circuit breaker.  
• Broken drive belt. Call the service person.                                                                                           |
| Stops/Pauses During Cycle    | • Pauses are part of the washer’s normal operation. The washer will stop (pause) shortly before the wash and rinse spins.  
• Check the laundry room fuse or circuit breaker.                                                                                     |
| Won't Drain                  | • Make sure drain hose is not kinked or twisted.  
• Make sure drain hose is not clogged.  
• Make sure drain receptacle is not clogged.  
• Refer to the Installation instructions to make sure that the drain hose has been properly installed.                                  |
| Water Leaks                  | • Check that fill hoses are properly installed on the faucets and the washer’s water mixing valve.  
• Check the condition of the fill hoses. Replace fill hoses every five years.  
• Make sure drain receptacle is not clogged.  
• Check laundry room plumbing.  
• Check house water pressure. In cases of extremely low water pressure, leaking may occur.  
• Laundry load may be oversudsing or overloaded. Use less detergent (or low-sudsing detergent) and proper load sizes.               |
| Is Noisy                     | • Wash load may be unbalanced. Open lid and redistribute the load.  
• Make sure washer is level. Uneven leveling can cause vibration.  
• A newly installed washer may make a knocking sound if the machine has been in storage. The belt may have settled. Run washer through 4-5 cycles to loosen belt. Washer operation will not be affected. |
| Load Is Too Wet              | • Wash load may be unbalanced. Open lid and redistribute the load.  
• Load is too small. Add items to make full load.                                                                                     |
| Wrong Water Temperature      | • Make sure that the controls are properly set.  
• Check fill hoses. Make sure hot faucet hose is connected to hot mixing valve (indicated with “H” on the valve bracket) and cold faucet is connected to cold mixing valve (indicated with “C” on the valve bracket).  
• Make sure laundry room water heater is adjusted properly.  
• The Normal Eco cycle uses a colder water temperature.                                                                              |

<table>
<thead>
<tr>
<th>Washer Symptom</th>
<th>Possible Cause/Solution</th>
</tr>
</thead>
</table>
| WASH, RINSE STATUS lights on continuously | • This code indicates the washer has filled to the overflow level.  
• The machine will begin to attempt to pump water out if the lid is closed and locked.  
• If the code does not clear, unplug the machine and call for service. |
| RINSE, LID LOCK STATUS lights flash 3 times | • The control senses that the lid will not unlock.  
• Unplug the machine for three minutes to unlock the lid.  
• If the code appears again, call for service. |
| RINSE, LID LOCK STATUS lights flash 2 times | • This code indicates that the lid has not locked.  
• Make sure the lid is closed all the way and try to start the cycle.  
• Open the lid or unplug the machine to clear the code.  
• If this code continues, call for service. |
| WASH, SPIN STATUS lights flash 2 times | • This code indicates that the washer did not reach the maximum intended speed in the final spin.  
• This could be due to an unbalanced load, excessive suds in the load, or too much water left in the tub due to slow draining.  
• Be sure to use proper load sizes that are evenly distributed in the wash basket.  
• Be sure to use high efficiency (HE) detergent.  
• Open the lid or press the Start/Pause button to clear this code. |
| WASH, RINSE STATUS lights flash 3 times | • This code will be displayed after a cycle until the lid is opened or the Start/Pause button is pressed. It indicates an oversudsing condition.  
• Laundry load may be oversudsing. Make sure you are using low sudsing, high efficiency (HE) detergent. If using non-HE detergent, use only 1/2 of the detergent manufacturer's recommended amount.  
• Laundry load may be overloaded. Make sure you are using proper load sizes. |
| All STATUS lights flashing | • If the all STATUS lights flash, unplug the machine for 15 seconds. Plug the machine back in. If the lights still flash, call for service. |
Warranty Repairs

If something should occur with your washer or that requires service please use the service locator at www.speedqueen.com.

We would like to point out items that would not be considered a product failure and are not covered under warranty. If a service technician is called for the items listed below you will be responsible for payment of the service call.

- Plugged or restricted drain pipes
- Plugged or restricted water filters or fill valve screens
- Home electrical issues
- Foreign objects found inside the washer or pump
- Drain issues caused by standpipes that exceed factory specifications

Contact Information

If service is required, contact the nearest Factory Authorized Service Center. To find the nearest service center, visit us online at www.speedqueen.com.

If you are unable to locate an authorized service center or are unsatisfied with the service performed on your unit, contact:

Speed Queen
Shepard Street
P.O. Box 990
Ripon, Wisconsin 54971-0990

www.speedqueen.com - select "Find Service" and enter your zip code to find a local service company

Phone: (920)748-3121

When contacting us about your washer, PLEASE GIVE THE MODEL AND SERIAL NUMBERS. The model and serial numbers are located on the serial plate. The serial plate will be in the location shown. Please include a copy of your bill of sale and any service receipts you have.

If replacement parts are required, contact the source from where you purchased your washer or visit us online at www.speedqueen.com.
